

A new [ENCORE biodiversity module](#) has just been launched by the [Natural Capital Finance Alliance](#), a collaboration between the UN Environment Programme World Conservation Monitoring Centre, the UN Environment Programme Finance Initiative and Global Canopy. The module enables banks and investors to explore the potential alignment of their financial activities in the agriculture and mining sectors with a nature-positive future.

**AMERRA Capital Management** was one of over 30 financial institutions worldwide taking a pioneering role participating in the development of the ENCORE biodiversity module.

The new module lies at the cutting-edge of sustainable finance, allowing banks and investors to map their current exposure to the risk posed by species extinction and the loss of ecological integrity. The module allows institutions to explore future scenarios, identifying potential pathways to increase positive impacts within agricultural and mining portfolios, as well as transition mining portfolios to a low energy future. It also provides guidance on company engagement, enabling financial institutions to work with stakeholders in high-priority areas to adapt production practices with the aim of making them nature-positive.
